	PROGRESS REPORT NO. 4	
Development of t	the ET-2 (Phase II) - Task 7, Pinto	25X1

PERIOD: 1 May 1955 to 1 August 1955

OBJECTIVE

The aim of this task is the production of three improved models, design information, and complete manufacturing drawings and specifications for a miniaturized electromechanical transmitter known as the $E^{\frac{1}{2}-2}$.

PROGRESS

Progress during this last report period was impeded considerably by a labor dispute involving the production personnel. The engineering people within the company did not participate in the strike: therefore a considerable production backlog was generated. Due to the strike and the production overload the project has incurred a delay of approximately six weeks.

STATUS

All of the parts for the ET-2 have been designed and drafted and are in production. The component boards have been assembled and are ready for assembly into the final units. The present production schedule is such that all of the mechanical parts will be ready for assembly by 30 August 1955.

PLANS

It is planned to complete the fabrication and testing of the three models during the next report period.

PERSONNEL

The following personnel were assigned to this project during this report period.

Project Supervisor Mechanical Engineer Electrical Engineer Engineering Assistant
